Governance 2:

Navigating the Future: AI Governance Strategies for Organizational Success

Presenter:

<ul style="list-style-type: none">Marc Gordon	Director of Information Management	Alliance for Healthier Communities
---	------------------------------------	--

Description:

Welcome to "Navigating the Future: AI Governance Strategies for Organizational Success." In this presentation, we delve into the vital landscape of AI governance and illuminate key considerations for policy development. This presentation will review strategies to shape responsible AI policies that propel your organization into the future.

Session objectives and learning outcomes:

- Understanding Ethical Challenges with AI
- AI Policy Development
- Risks and Opportunities to implementing AI solutions

Full description:

Challenge:

This presentation addresses the critical landscape of AI governance, aiming to provide organizations with a roadmap for responsible AI policies. The challenge involves navigating the complexities of AI technologies and ensuring that policies are in place to address ethical concerns and the responsible use of AI. The initiative is designed to enhance the organizational strengths in leveraging AI while mitigating associated risks.

Action:

The initiative was developed through extensive research, attending presentations by experts, attending panel reviews, reviewing articles and the actual use of AI. The cumulation of knowledge from multiple stakeholders will help advance the attendees' understanding that organizations need to be proactive when it comes to implementing AI solutions

Impact:

The outcomes of the initiative include guidance on AI governance policies, understanding of ethical AI use, and enhanced organizational awareness of AI-related risks and opportunities

Trajectory:

Organizations can use this knowledge to develop their AI Governance and Policy programs.
